Mayfield Community Update - February 2022

Propane Volume Update

Supporting the heating needs of homes and businesses, propane tank car volumes remained at similar levels in February compared to January. This was expected and these are the two peak months of car orders for the year. Due to warming trends post-February, car orders have declined from February to March by roughly 35%. Our customer anticipates similar percent decline of car orders from March and April before leveling out through the spring and summer.

As noted in previous messages, these are estimates subject to change and offered in an effort to be as transparent as possible. Regardless of number of cars, CSX wants the community to know that cars move everyday as part of efficient and safe local service and cars are not stored in the yard.
